

IAN DAVE B. MORENO

QA Tester / QA Automation Engineer

Tagbilaran City, Bohol, Philippines | morenoiandave@gmail.com | github.com/iandavemoreno/threadline-ecommerce

SUMMARY

QA Tester with hands-on experience in manual, exploratory, and regression testing, plus self-directed growth into automated testing with Playwright and JavaScript. Comfortable working with REST APIs (requests, responses, status codes, JSON, authentication), writing test cases, tracking defects through to resolution, and collaborating with developers to reproduce and verify fixes - with an emphasis on accurate, evidence-based reporting over false positives. Built and maintain a 440+ test Playwright automation suite from scratch on a personal full-stack project, covering UI, API, and cross-browser (Chromium, Firefox, WebKit) testing with CI integration, using AI coding tools throughout while independently validating every output.

PROFESSIONAL EXPERIENCE

Software QA Tester - Forty Degree Celsius Inc.

October 2023 - July 2026

- Tested Native Camp, an online English-learning platform, across web, iOS, and Android.
- Wrote test cases and executed test plans; ran exploratory, regression, and retesting cycles each release.
- Logged and tracked defects in Jira; worked directly with a Bridge Engineer and web/mobile developers to reproduce issues and verify fixes.
- Operated within both Agile and Waterfall workflows depending on the release.

AUTOMATION PROJECT (SELF-DIRECTED)

ThreadLine - Full-Stack E-Commerce Application

github.com/iandavemoreno/threadline-ecommerce

- Built a complete e-commerce site (Node.js/Express/SQLite backend, HTML/CSS/JS frontend) specifically as a testbed to practice real-world QA automation.
- Wrote and maintain a 440+ test Playwright suite using the Page Object Model, covering UI flows and API-level tests, tagged for smoke-test subsets, and run in CI via GitHub Actions.
- Diagnosed and fixed a concurrency bug causing intermittent cross-browser login failures - traced an intermittent WebKit timeout back to synchronous password hashing blocking Node's event loop under parallel test load, then verified the fix across repeated runs.
- Practiced full QA feature cycles end to end: writing the feature, manually verifying it, then building automated coverage for it before moving on.
- Used AI coding tools throughout development - drafting code and tests, speeding up debugging - while independently verifying every output against manual testing and real application behavior before relying on it.

EDUCATION

Bachelor of Science in Information Technology

Holy Name University

SKILLS

Testing & QA: Playwright (E2E + API), Page Object Model, manual/exploratory/regression testing, test case design, defect tracking (Jira), Agile & Waterfall

AI-Assisted Development: Drafting code and tests with AI coding tools, using AI to speed up debugging, independently validating every output against manual testing and real application behavior before relying on it

Technical: JavaScript, Node.js, Express, REST APIs (JSON, HTTP status codes, header-based authentication), SQL (SQLite), HTML/CSS, Git/GitHub, CI/CD (GitHub Actions)

Platforms tested: Web, iOS, Android
